Editor in Chief
Journal of Biomedicine and Translational Research

Dear Editor,

We are pleased to submit the manuscript entitled “Association Between Serum Vitamin D and Hepcidin Serum Levels in Children with Chronic Kidney Disease: A Cross-Sectional Study” for consideration for publication in the Journal of Biomedicine and Translational Research.

In this paper, we report a study that investigates the relationship between serum hepcidin and vitamin D in children with chronic kidney disease. This study provides new pediatric data showing a significant inverse association between these two biomarkers, suggesting a potential role of vitamin D status in hepcidin regulation and anemia in CKD.

We believe this manuscript is well suited for your journal and offers meaningful insights into anemia mechanisms in pediatric CKD. We confirm that neither the manuscript nor any parts of its content are currently under consideration or published in another journal. The authors received no specific funding for this work. All authors have approved the manuscript and agree with its submission to the Journal of Biomedicine and Translational Research

We eagerly await your opinion.

With warm regards,

Jusli Aras
