Title of Manuscript : **Characteristic Differenced Between Very Low Birth Weight Preterm Infants who Experienced Weight Gain According to The Target and Not According to The Target on The Administration of Human Milk Fortifier**

Editor-in-Chief

Journal of Biomedicine and Translational Research

Dear Prof. dr. Sultana MH Faradz, PhD,

On behalf of my co-authors, I am submitting the enclosed manuscript for possible publication in Journal of Biomedicine and Translational Research. In this original research article, we examined characteristic differences between very low birth weight premature babies underwent on-target and not on-target weight gain on the administration of human milk fortifier through a case control study and can confirm that there was no characteristic difference between both groups. Given the alarming increase of very low birth weight premature babies and the lack of research on very low birth weight premature babies, we believe that the findings presented in our paper will appeal to the doctors, pediatricians, and clinicians who subscribe to Journal of Biomedicine and Translational Research.

This paper takes a different approach to the issues explored by Christine Henriksen in "Growth and nutrient intake among very-low-birth-weight infants fed fortified human milk during hospitalization", also published by British Journal of Nutrition on 2009. Each of the authors confirms that this manuscript has not been previously published and is not currently under consideration by any other journal. Additionally, all of the authors have approved the contents of this paper and have agreed to the Journal of Biomedicine and Translational Research submission policies.

Each named author has substantially contributed to conducting the underlying research and drafting this manuscript. Additionally, to the best of our knowledge, the named authors have no conflict of interest, financial or otherwise. I guarantee that I have checked that no intentional or unintentional plagiarism has occurred in the present manuscript and all original references have been read, studied, and cited. I confirm that all figures, tables, or schemes are

original and are created by authors of this manuscript unless otherwise stated and then official permission has been obtained from authors and the publisher. I confirm that instruction for authors of this journal has been read carefully and all points are complied for the whole manuscript.

Sincerely,

Diondra Eka Rizkiawan
